Buzási Regina

Short definition

Pettermann Shaun Pharrell

- Did the design, the look and feel of the website, and its basic functions.

Bagoly Donát

- Made the application behind the website that handles all the functions.

Buzási Regina

- Created the database and filled the tables with data and stored procedures.

Csapat munkaterhelése

Követheted a csapatod kapacitását. [Az ügyek ismételt hozzárendelése a megfelelő egyensúly eléréséhez](#)

Hozzárendelt személy	Munka eloszlása
 Bagoly Donát	33%
 Shaun Pharrell	33%

Questions and discussion

What is SkillBook?

SkillBook is a web-based interactive learning and booking platform designed for students and teachers. It enables course creation, enrollment, material sharing, and direct messaging.

Students

Browse, enroll and learn from courses. Leave reviews, chat with instructors.

Instructors

Create and manage courses, upload materials, answer student messages.

Admins

Full platform oversight: manage users, courses, categories, and all content.

SkillBook

 Course Catalog

 Easy Enrollment

 Material Upload

 Direct Messaging

 Course Reviews

 Secure Auth

Why we build SkillBook?

And what gap does SkillBook fill?

Fragmented Tools

Students use email for enrollment, Google Drive for materials, and WhatsApp for questions. Everything is scattered.

Instructors Lack Control

Teachers have no centralized space to manage their courses, upload learning materials, and track student progress.

No Unified Booking System

No easy way for learners to browse available courses, check uploaded materials, and profile management.

Missing Community Layer

No built-in communication between students and instructors leads to lower engagement and higher dropout rates.

 **SkillBook solves all of this. One platform for learning, booking, and communication.**

Key features

Course Catalog

Browse courses across 36 categories

Easy Enrollment

One-click registration for any course

Material Upload

Teachers upload PDFs, images, documents

Messaging

Direct chat between students and instructors

Reviews & Ratings

Students rate and review completed courses

Secure Auth

JWT-based authentication with role access control

Database design - relation ships

Stored procedures & business logic

66 stored procedures handle all CRUD operations.

User Management

⚙️ createUser()

⚙️ updateProfilePicture()

⚙️ updateUser()

⚙️ updateUserPassword()

⚙️ deleteUser()

⚙️ getUserById()

Enrollment & Sessions

⚙️ createEnrollment()

⚙️ createCourseSession()

⚙️ updateEnrollment()

⚙️ updateCourseSession()

⚙️ deleteEnrollment()

Course Operations

⚙️ createCourse()

⚙️ getAllCourses()

⚙️ updateCourse()

⚙️ getCourseById()

⚙️ deleteCourse()

⚙️ getCoursesByInstructor()

Quiz System

⚙️ createQuiz()

⚙️ updateQuiz()

⚙️ createQuizQuestion()

⚙️ deleteQuiz()

⚙️ createQuizResult()

⚙️ getAllQuizzes()

Technology stack

Frontend

HTML / CSS

Semantic structure, custom properties, responsive grid

JavaScript

Dynamic auth, API calls, DOM manipulation

Glassmorphism UI

backdrop-filter, CSS gradients, animations

Backend

Java backend

RESTful API, controllers for each entity

JWT Authentication

Token-based auth with role-based access control

File Upload API

Profile pictures, course headers, materials

Database

MySQL

Relational database with foreign key constraints

Stored Procedures

Stored procedures for CRUD — all business logic in DB

phpMyAdmin

Database management and administration interface

Why we built SkillBook

Real-World Need

Many small schools and training centers still manage enrollments through phone calls, emails, or paper forms. SkillBook digitalizes this entirely.

Accessible Education

Affordable access to quality learning should not be a privilege. Our platform makes finding and joining courses simple for everyone.

Full-Stack Challenge

We wanted to build something that exercises every layer: database design, REST API, authentication, file handling, and a polished frontend UI.

Portfolio Quality

A functional booking + LMS system demonstrates skills far beyond a typical CRUD app — including roles, sessions, and real-time features.

Thank you!

We built SkillBook to prove that modern, scalable, and user-friendly education platforms are achievable with the right architecture and design.

✓ Problem solved: Unified learning, enrollment & communication

📚 Tech used: HTML · JS · JAVA · MySQL

📊 Database: 11 tables · 66 stored procedures

👥 Users supported: students · Teacher · Admins
